

SPECIAL OFFER FOR PERIODIC TESTING OF

# ELECTROSTATIC

PRODUCTS

**ELECTROSTATICS** offers special pricing for all periodic testing (visual inspection, resistance and conductivity measurement, and screening test if required by the type of suit), on all own products!

## WHY IS PERIODIC TESTING NECESSARY?

- IEC 60895:2020 standard recommends periodic testing every 12 months, or after 10 washings, whichever comes first, or according to national or local procedure.
- If any faults are discovered during the test, the repair is conducted immediately, and/or the used/worn accessories are replaced.

## WHY IS PERIODIC TESTING NECESSARY?

- The tests are performed in the High Voltage Laboratory at Budapest University of Technology and Economics (BME-HVL), an IEC 17025 accredited laboratory, with which beneficial technical collaboration is present.
- Experts of the BME-HVL have participated in creating the IEC, IEEE, ASTM standards and have many years of experience in the field.
- Some tests (e.g.: screening efficiency) require a special accredited laboratory guaranteed by the cooperation with BME-HVL.

## SCREENING EFFICIENCY TEST IN THE BME-HVL:

- It fulfills every criterion of the IEC 60895:2020 standard.
- Both Method #1 and Method #2 (the result of the investigation of the BME-HVL Team) can be performed.
- Based on the BME-HVL results, ELECTROSTATICS was the first company in the world that promoted the importance of wearing face mesh.

If you are interested in ELECTROSTATICS periodic tests, don't hesitate to contact us!
